MY AIXAM MY SAFETY

AIXAM, leader in AM-license vehicles for about 30 years, has solid experience in manufacturing quadricycles. Aware that being mobile requires flawless quality, AIXAM builds very safe vehicles with a definitively advanced design.

■ **ACTIVE SAFETY MEASURES:**
Carefully selected, high-quality fittings to avoid all dangers.

See and be seen.

Wide and laminated windscreens, large wing mirrors developed for Aixam in line with the latest automotive standards, powerful headlamps, front and rear LEDs: all of these fittings ensure your safety as you go about your daily trips.

Be comfortable to drive well.

The comfort of your AIXAM is extremely important in order to boost your vigilance and your interest in driving. The instruments have been carefully thought out so that each command is efficient. There are a number of storage spaces to avoid falling objects, and sound-proofing provides a sense of well-being so you can concentrate on driving.

ABS*.

AIXAM fits its range with ABS* with four sensors connected to an electronic calculator. Constantly informed of the grip of the front and rear axles, the calculator modulates the braking power on each wheel to guarantee the directional balance of your Aixam.

When the wheels lock up when braking, it is impossible to control the vehicle's trajectory. The ABS system avoids the wheels locking up, all the while ensuring maximum grip of the tyres. The advantage for the driver is optimal braking on difficult roads, minimising risks of skidding and still managing to steer the vehicle. Come rain, come snow or come ice, you remain in control of your Aixam.

* Optional (S and Premium versions) or standard (GTI).

CHASSIS

BODYWORK

SAFETY SHELL

■ **PASSIVE safety measures:
A number of technologies and fittings
for your safety.**

Road handling.

Thanks to its four independent wheels, its MacPherson-type struts and its trailing arms, road handling is impeccable. In stability tests (chicane, momentum, slalom), the vehicle passed all tests above the authorised speed (45 km/h). The tyres ensure grip and handling. AIXAM pays particular attention to its tyre selection.

■ **PROTECTION OF OCCUPANTS:
Understand how an AIXAM vehicle
is designed in the event of a shock.**

Aixam's priority is to protect you

The materials and technology have been combined to ensure your internal and external safety. Thanks to the high-tech design, your AIXAM succeeds in crash tests.

A dual envelope to provide unique protection.

AIXAM has developed a very rigid extruded aluminium chassis and thermo-shaped injection-moulded ABS PMMA bodywork. This safety shell absorbs kinetic energy of light shocks with a bodywork that reshapes itself. The chassis protects from deformations in the event of a large shock.

HOW IS A CRASH-TEST SUCCESSFUL?

- Passenger compartment intact with no notable deformation: no intrusion, no injuries, you are not stuck inside your vehicle.
- The windows are not broken: no cuts, no injuries.
- The seatbelts are designed to not get stuck: no discomfort or panic when trying to leave the vehicle.
- The doors do not open during the accident: no ejection. The door handles function correctly: the door opens easily so you can leave the vehicle.

THE AIXAM CHOICE

Owning an Aixam means adhering to a set of values that promote seriousness and quality.

Recyclable

AIXAM actively takes part in preserving the environment by recycling its cars. Nearly 100 % are recycled. AIXAM always uses reusable or recyclable materials.

Ecological

For AIXAM, the environment has always been a major concern. In association with KUBOTA (diesel engines) and LOMBARDINI (petrol engines), AIXAM has developed a full range of engines characterised by their very low fuel consumption and controlled CO₂ emissions.

AIXAM's vehicles are some of the best on the market in terms of CO₂. Only 77.9 g/km: that is less than 37 % of CO₂ compared to the average objective of 125 g/km set by the European Parliament..

77,9 g/km
of CO₂

Compliance with regulations

Your Aixam is built in compliance with European standards. Other essential safety factors are the weight when empty (350 kg), the 4 kW engine, and a maximum speed limit of 45 km/h.

So French

Your Aixam is designed, created and assembled in France. The teams are located on two production sites in the Rhône-Alpes region (Aix-les-Bains and Chanas): AIXAM is a flagship of French manufacturing.

tested without complacency

Vehicles are subjected to rigorous testing to ensure your safety. AIXAM puts all of its models through stability tests: ISO chicane, momentum test and slalom. They all pass above the authorised speed limit (45 km/h).

AIXAM

THE POWER OF A NETWORK

The network relays the quality of your AIXAM.

Meet expert and trained teams. Their role is to guide you through the range, to advise you on available services and to be there for you on a daily basis. Their attention guarantees the long-term reliability of your AIXAM.

FINANCING

Assistance and warranty

After-Sales Service

Thanks to its partners, AIXAM can suggest solutions that suit your budget. Your Distributor can study the best financing method with you in line with your requirements and possibilities.

Because your satisfaction has to be long-term, AIXAM guarantees its vehicles for two years for parts and labour and offers you two years of breakdown assistance with unlimited mileage as a proof of its commitment.

The AIXAM network has an optimal after-sales service. A constant stock of spare parts allows your Distributor to provide you with a solution quickly.
